Topic: Water Cycle

## Column Notes

Topic of text or discussion	What you learned from text, discussion	Your questions, observations, opinions, and thoughts
Water Cycle	During the water cycle, water changes from a liquid to a gas and back to a liquid.	I thought this was interesting because last semester Mrs. Smith taught us the three states of water and now I've put that to use. I understand how rain happens and how the water gets into the clouds.
Condensation	When water vapor rises, cools, and changes from a liquid to a gas.  Water vapor from an ocean can be carried a long way through the atmosphere.	It's funny to think that the water that is evaporated over the Gulf of Mexico could pour down on some city in North Carolina.
